Capability Statement

Business consulting for science and technology ventures

A Puerto Rico-based consulting and venture studio helps organizations plan, build, and operate science and technology initiatives through strategic advice, digital systems, financial data workflows, research, market intelligence, and specialized assurance.

Core competencies

Venture strategy and commercial development

Business planning, organizational and opportunity assessment, proposal and funding support, strategic partnerships, enterprise opportunities, and intellectual property discussions.

Digital infrastructure and financial operations

Managed domains, DNS, business email, websites, digital workspaces, applications, workflow systems, financial data reconciliation, and reporting controls.

Market intelligence, data science, and AI

Market and company research, technology sector analysis, organizational risk assessment, data curation and annotation, and AI or machine learning workflow implementation.

Scientific research and AI assurance

Scientific programming, research analysis and communication, publication workflows, and adversarial evaluation of scientific models, research agents, and sensitive data systems.

Who we support

We work with organizations that turn specialized knowledge, services, and analysis into practical outcomes.

Science, research, and technology

Research groups, science-driven ventures, biotech and AI startups, university spinouts, and teams that depend on reliable digital systems and evidence.

Professional firms and analytical teams

Accounting and law firms, consultancies, quantitative teams, and other service organizations that need dependable infrastructure, workflow support, market intelligence, or financial data operations.

Builders and independent operators

Construction businesses, contractors, and skilled-trade operators seeking clearer digital operations, customer communication, and practical technology.

Starting at $500 per month

Managed digital infrastructure and service operations

A standardized monthly foundation for small science, technology, consulting, and analytical teams. The base plan combines domain management, business email, a professional website, a customer dashboard, and ongoing support through one accountable service team. Customers may submit requests as needed; work is prioritized and delivered within the plan's monthly credits.

Scope of work

- Domain portfolio review, DNS, setup, renewals, and hygiene
- Business email setup, authentication, user and group administration
- Mobile-responsive professional website, contact forms, analytics, and basic SEO
- Dashboard visibility into requests, deliverables, timelines, and status
- Vendor and license charges billed separately at cost with customer approval
- Out-of-scope work requires approval before additional billing

Workflow

01 **Set the operating scope**
Review the team, digital assets, service priorities, and required access.

02 **Prepare domains and email**
Configure DNS, renewals, business email, authentication, and user access.

03 **Build the public presence**
Create or update a responsive website with agreed content and contact paths.

04 **Connect requests and delivery**
Organize requests, approvals, deliverables, and status in the customer workspace.

05 **Maintain and improve**
Prioritize support, routine updates, and approved work within the service plan.

Applications
Domain management, professional email, responsive websites, client request tracking, and monthly digital operations.

Scope note
Included work is delivered within plan credits. Vendor and license costs or out-of-scope work require approval.

Scoped beyond the Base plan

Digital systems, applications, and automation

Broader infrastructure engagements can extend the Base foundation with digital workspaces, custom web or mobile applications, system integrations, workflow automation, financial data operations, and ongoing technical coordination.

Scope of work

- Workspace configuration and team training
- Custom software and system integration
- Workflow automation and data operations
- Financial data reconciliation and reporting controls

Workflow

01 **Map the workflow**
Document the people, systems, inputs, and handoffs involved in the operation.

02 **Define system requirements**
Agree on user needs, integrations, access, and acceptance criteria.

03 **Configure or build**
Implement applications, integrations, and automations within the approved scope.

04 **Validate with the team**
Review expected behavior, data handling, exceptions, and usability.

05 **Deploy and support**
Document the system, transfer operating knowledge, and coordinate follow-up.

Applications
Connected workspaces, client applications, internal operations, and integrated workflows.

Scope note
Systems, access, data handling, and human review responsibilities are agreed before implementation.

Market intelligence and venture assessment

Decision support for founders, operators, investors, and research-driven companies assessing markets and technology ventures. Work is scoped to the question, evidence, and decision context.

Scope of work

- Technology sector and market landscape research
- Company, portfolio, and opportunity assessment
- Patterns, organizational risk, and data analysis
- Strategic partnership and enterprise opportunity research
- Decision briefs with sources, assumptions, and implications

Workflow

01 **Frame the decision**
Set the research question, decision context, and market boundaries.

02 **Map the market**
Identify relevant segments, organizations, technologies, and evidence sources.

03 **Assess opportunities**
Compare companies, ventures, partnerships, and commercial signals.

04 **Analyze evidence and risk**
Distinguish observed information from interpretation and assumptions.

05 **Deliver decision support**
Present sourced findings, implications, and material limitations.

Applications
Market entry, competitor research, opportunity assessment, and partnership planning.

Scope note
Findings reflect available evidence and are not guarantees of commercial outcomes.

Contributing teams
Studio, InfraOps

Starting at $5,000 per engagement

Scientific research, computational analysis, and publication

Scientific research support combines computational methods, data analysis, interpretation, and research communication. Engagements are defined around the scientific question, available data, methods, and intended audience.

Scope of work

- Scientific programming and reproducible analysis workflows
- Data curation, quality review, and interpretation
- Analytical reports, figures, and publication materials
- Research publication and revision workflows
- Projects in multi-omics, molecular dynamics, and public health

Workflow

01 **Define the research question**
Agree on objectives, available data, methods, and intended audience.

02 **Prepare research data**
Organize inputs and document data quality and handling requirements.

03 **Run the analysis**
Build and execute computational methods with reproducible records.

04 **Review and interpret results**
Check outputs, assumptions, and limitations against the evidence.

05 **Communicate findings**
Prepare reports, figures, papers, or publication materials for review.

Applications
Scientific analysis, data curation, publication materials, and research communication.

Scope note
Methods and conclusions are bounded by available data, data quality, and the agreed research scope.

Contributing teams

Starting at $10,000 per engagement

Scientific AI assurance and adversarial evaluation

Scoped adversarial assurance for scientific language models, co-scientist agents, evaluation harnesses, and sensitive research data systems. Testing is authorized, bounded, and reported for the teams responsible for risk decisions.

Scope of work

- Scientific model and evaluation harness assessment
- Research agent and tool-access testing
- Sensitive biological and chemical data workflow review
- Threat scenarios and reproducible evidence
- Prioritized remediation guidance for scientific and security stakeholders

Workflow

01 Authorize and bound the work
Confirm systems, permissions, data classes, objectives, and exclusions.

02 Inventory the workflow
Document intended use, system components, tools, and human oversight.

03 Evaluate agreed requirements
Run controlled assessments within the approved environment and methods.

04 Record evidence
Document observations, reproducible results, scope, and limitations.

05 Prioritize remediation
Deliver findings and practical next steps to the responsible teams.

Applications
Scientific models, research agents, evaluation controls, and sensitive data systems.

Scope note
Testing is authorized and limited to the agreed systems, permissions, and methods.

Scope and pricing set by engagement

Venture strategy, funding, and commercialization

Cross-disciplinary consulting helps teams turn scientific or technical opportunities into executable projects and commercial plans. Ozcorp can coordinate specialist collaborators when an engagement calls for expertise across business, research, and technology.

Scope of work

- Business planning and organizational assessment
- Funding opportunity and proposal development support
- Project scoping and delivery coordination
- Strategic partnerships and commercial development
- Enterprise and intellectual property opportunity support

Workflow

01 **Assess the opportunity**
Clarify the venture, organizational needs, and intended outcomes.

02 **Develop the business direction**
Shape plans, operating priorities, and commercial assumptions.

03 **Identify funding pathways**
Review suitable funding opportunities and proposal requirements.

04 **Build strategic relationships**
Assess partnership, enterprise, and intellectual property opportunities.

05 **Plan execution**
Translate priorities into a scoped project plan and coordinated next steps.

Applications
Business plans, funding proposals, strategic partnerships, and commercialization.

Scope note
Funding and commercial outcomes are not guaranteed. Recommendations are scoped to client evidence and objectives.

Scope and pricing set by engagement

Digital accounting and financial workflows

We design financial data processing workflows that connect source documents, transaction records, accounting policies, and reporting. The implementation is tailored to the client's systems, data, and review requirements.

Scope of work

- Bank statement and payment processor data ingestion, with OCR where suitable
- Bank, Stripe, and internal ledger transaction matching with defined date tolerances
- Exception reporting for unmatched items and missing documents
- Configurable classifications, withholding tax, intercompany, and contract revenue rules
- Balance sheet, profit and loss, cash flow, and period-close reporting
- Change history, backups, audit trails, and separation of processing, validation, and reporting

Workflow

01 **Ingest and extract**
Collect bank statements, payment processor records, and internal transaction data. Use optical character recognition, or OCR, to extract information from suitable documents and process sensitive inputs separately before review.

02 **Reconcile and investigate**
Match transactions across bank accounts, Stripe, and internal records using configured rules and date tolerances. Identify unmatched items, discrepancies, and missing documentation for review.

03 **Apply accounting rules**
Configure classifications and accounting policies for items such as withholding taxes, intercompany transfers, and contract revenue. Revenue recognition workflows can be designed around applicable generally accepted accounting principles and ASC 606, subject to professional review.

04 **Prepare financial reports**
Organize reconciled information for balance sheets, profit and loss statements, cash flow statements, and period-end closing. Maintain links to supporting transactions and documents for review.

05 **Protect and trace changes**
Design ledger controls, change histories, backups, recovery procedures, and separation of processing, validation, and reporting responsibilities. Immutable records and access controls can be specified where appropriate.

Applications
Multi-bank reconciliation, investor and grantor reporting, funding applications, tax and audit preparation support, and contract reporting.

Scope note
Automation supports, but does not replace, review by the client and qualified accounting or tax professionals.
